

INNOVATIVE NEW PRODUCT

# DURALINE™

## BLASTHOLE LINING

DURALINE™ is a reinforced woven double-laminate liner used for lining blast-holes experiencing dynamic water activity, requiring dewatering, or requiring longer sleep times.

DURALINE's™ strength and practicality makes it the most trusted liner material available.

DURALINE™ supports a consistent charge column in cracked or voided ground.

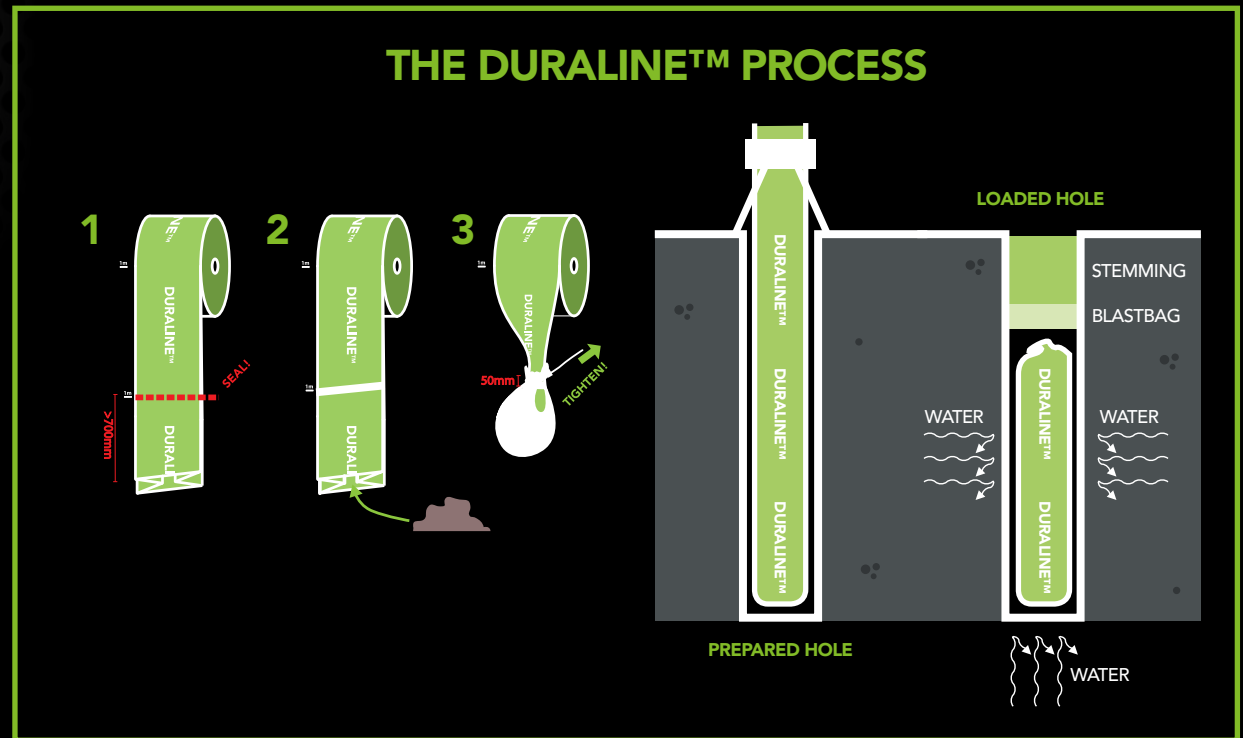

DURALINE™ – for a better blasting outcome

# DURALINE™ BLASTHOLE LINING

## KEY BENEFITS

- **REDUCE** costs – save up to 35% using ANFO
- **REDUCE** cost of wasted product in cracked and voided ground
- **REDUCE** powder factor
- **REDUCE** fume

- DURALINE™ significantly reduces blasting costs by eliminating the need to use expensive water-proof explosives in favour of cost effective ANFO.
- One Size Fits All (230mm – 270mm) – DURALINE™ features seamlessly expanding side gussets.
- Gussets eliminate liner twisting and breaching ensuring high-speed deployment and reliable loading.
- DURALINE™ is constructed out of lightweight, rip-stop and high tensile, impact and abrasion resistant material.
- Convenient to handle rolls marked at 1 metre increments for practical on-bench sizing, cutting and sealing.
- The DURALINE™ SMART all-weather welding machine allows liners to be cut and sealed to length easily on-site (IP65, 12v and 24v PLC controlled).
